

Job Description: Maintenance Electrician

Department: Maintenance

Job role overview: This role will work as part of a team of engineers responsible for the maintenance and installation of site machinery assets. This role will predominantly be involved in installing new electrical, compressed air and water infrastructure for upcoming production projects. This will include installation of mechanical infrastructure and containment as well as pipework and electrical cabling. Once the machinery is in place you will complete final connections and carry out initial inspection and certification.

In addition, there is a steady flow of installation jobs and maintenance tasks to keep facilities in good condition and appropriate for business needs. Compliance auditing such as emergency light checks, portable appliance testing and EICR are another aspect to the role.

You will need to have pride in your work, being focused on aesthetics and the technical detail as we are a customer facing factory.

Report to: Maintenance Team Leader

Location: Hinckley, Leicestershire

Duties and Responsibilities:

- Design and install new electrical circuits
- Install new compressed air and water pipework
- Portable appliance testing
